EXPERIMENT 8

NAME:DESHNA N ROLL NO:240701106

USER INTERFACE DESIGN

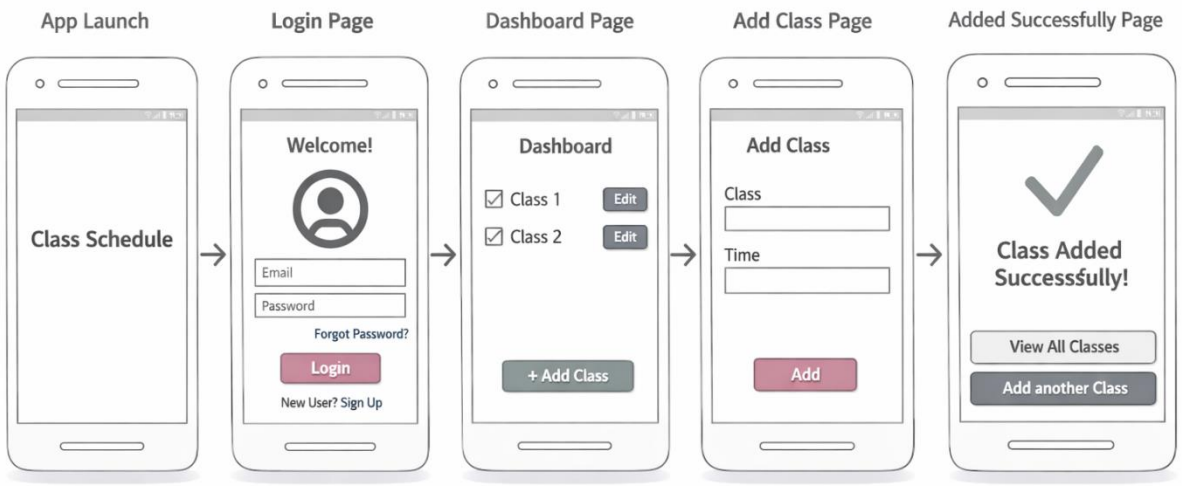
Create storyboards to represent the user flow for your application using Balsamiq here this software is used to show your application flow. which you can design the low fidelity prototype using the blasmiq normally the story board should create with comic scene. but here in this software you need to create the usage flow of the application in design in one screen.

STEP BY STEP USER JOURNEY:

- **App Launch:**

The user opens the app and sees the splash screen displaying the title *Class Schedule*. This serves as the entry point and introduces the app's purpose.

1. **Login Page:**
   The user is greeted with a welcome message and enters their *Email* and *Password*. They can also use the *Forgot Password?* link or sign up as a new user. After logging in, they are directed to the dashboard.

2. **Dashboard Page:**
   The dashboard displays a list of scheduled classes such as *Class 1* and *Class 2*. Each class has an *Edit* option for modifications. The user can add new classes by tapping the + *Add Class* button.
3. **Add Class Page:**
   The user enters details for a new class, including *Class Name* and *Time*. After filling in the information, they press the *Add* button to save the new schedule.
4. **Added Successfully Page:**
   A confirmation screen appears with a green checkmark and the message *Class Added Successfully!*. The user can choose to *View All Classes* or *Add Another Class* to continue organizing their schedule.


Low-Fidelity Storyboard and Wireframe Design:
