Task Analysis and User Flow for Tourist Application

Aim:

The aim of the Tourist Application is to help users easily discover tourist destinations, explore attractions, and book travel services through a mobile application. The app provides information about tourist places, hotels, transportation, and booking facilities in one platform. It improves the travel planning experience by allowing users to search destinations, view details, create itineraries, and make secure payments.

Task Analysis :

Task analysis is the process of identifying the tasks that users perform while using the tourist application. It helps understand how users interact with the system and what steps they follow to achieve their goals.

In the tourist application, users typically perform the following activities:

- Creating an account or logging into the application
- Searching for tourist destinations
- Viewing details about attractions, hotels, and activities

- Adding places to their travel itinerary
- Booking tickets or hotels
- Making online payments
- Viewing booking confirmations and travel details

Task analysis helps designers create an interface that is simple, user-friendly, and efficient for travelers.

Main Task Analysis

Main task analysis focuses on the most important tasks that users perform in the tourist app.

The primary tasks include:

1. **User Registration and Login**
   Users create an account or log in to access travel services.
2. **Destination Selection**
   Users choose the location they want to visit.
3. **Search for Attractions**
   Users search for tourist spots, hotels, or travel packages.
4. **View Destination Details**
   Users view descriptions, images, ratings, and reviews.
5. **Create Travel Plan**
   Users add selected places to their itinerary.

6. **Booking Services**
   Users book hotels, tickets, or tour packages.
7. **Payment Process**
   Users make payments through online methods.
8. **Confirmation**
   Users receive confirmation of their booking and travel details.

4. Main Tasks Identified

- The main tasks identified in the tourist application include:
- User registration and login
- Searching for destinations
- Viewing tourist attractions
- Adding places to itinerary
- Booking hotels or travel tickets
- Making secure payments
- Viewing booking confirmation
- Managing travel plans
- These tasks represent the core functions of the tourist app that allow users to plan and manage their trips effectively.

<u>User Flow:</u>

User flow describes the path a user follows while interacting with the tourist application to complete a task.

User Flow Steps:

1. Start the application
2. User logs in or registers a new account
3. User selects a travel destination
4. User searches for attractions or hotels
5. User views details about selected places
6. User adds destinations to itinerary
7. User proceeds to booking
8. User selects payment method
9. Payment is completed
10. Booking confirmation is displayed
11. Travel details are shown to the user
12. End process

This user flow ensures that the tourist application provides a smooth and organized travel planning experience.
